Subject: Madison Kipp Groundwater Data

Hi Mike. On April 9, 2015 Monitoring Well MW-22D was sampled for dissolved PCBs as part of the routine sampling at Madison Kipp. The result from the lab for this well indicated a concentration of 4.3 µg/L for dissolved PCBs, Aroclor 1242. This results was inconsistent with the previous 6 sampling events, which indicated no detection of dissolved PCBs. Based on the lab results, ARCADIS re-sampled the monitoring well on June 10, 2015 to confirm the result. The June 10 sample indicated no detections of dissolved PCBs, consistent with historical results. We have attached the lab report for your files. This well is scheduled for sampling as part of the groundwater monitoring program in October 2015.

Please let us know if you have any questions.

Best Regards,
Jennine
